Call: H2020-MSCA-RISE-2015  
Project no: 690970

OUR GOAL: facilitation, intensification and extension of interactions and collaborations between partners

Our main challenge: matching the consortium and secondment schedule with the RISE-requirements

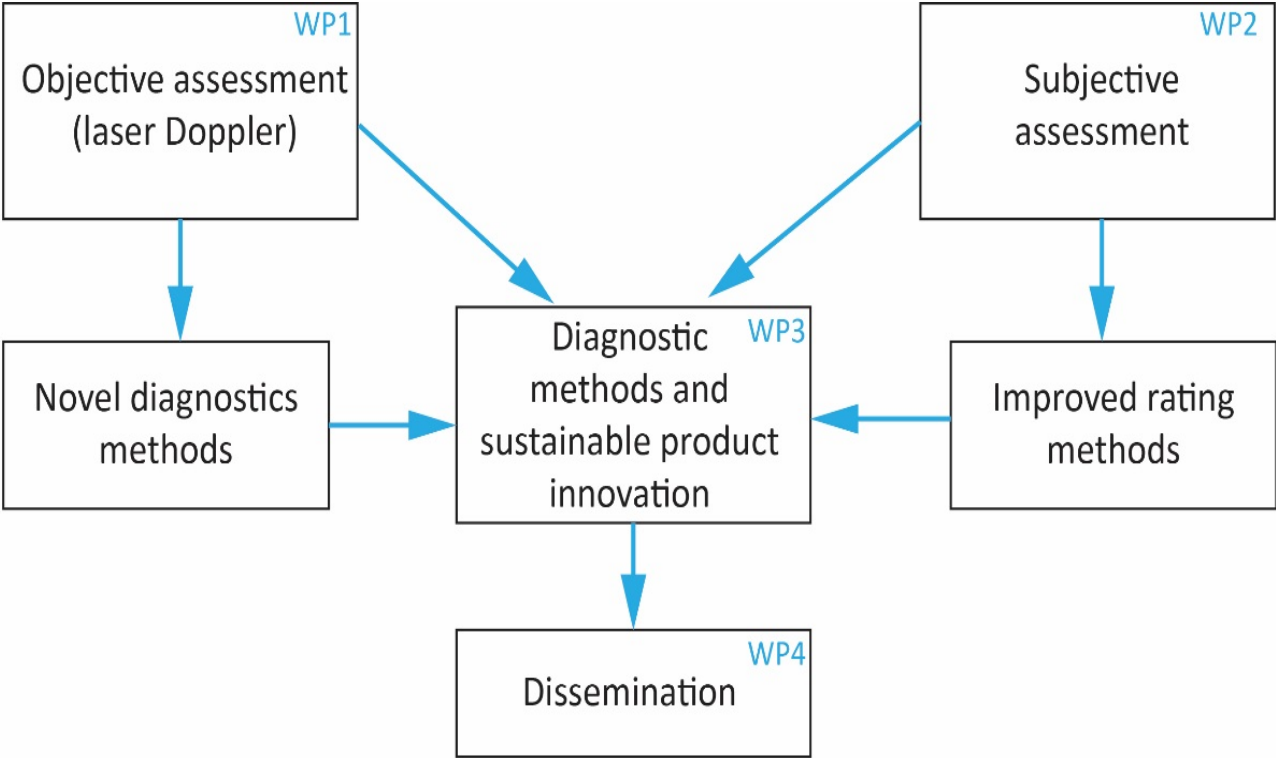

→ international OR AND intersectorial

Added value: exchange of know-how and 'culture' between complementary partners

Academic 'culture': scientific curiosity

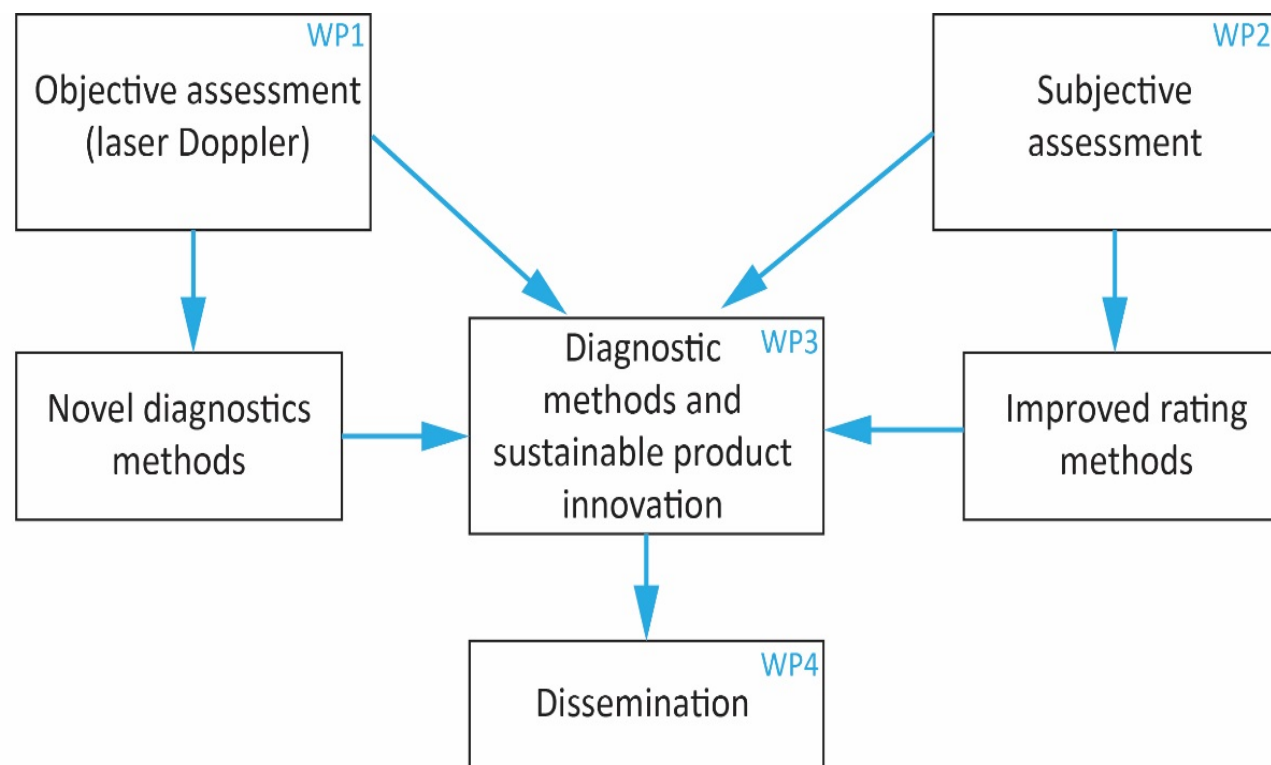

Industrial 'culture': commercial implementation (→ what does the customer want)

## What probably made this project (application/evaluation) successful:

- Beneficial impact for society
- Communication to wide audience
- Synergy academia
- Innovation and novelty
- Check for sustainability
- Advancing of personal careers

- **Contact your home administration and the national representative**
- **Double check project requirements (partner status...) with national representative and project officer**
- **Start as early as possible the iteration between involved people for an attractive and feasible/robust (plan B) secondment scheme (not trivial for small companies) (money back policy for unexecuted secondments)**
- **Involve the national representative and project officer in the iteration if possible**
- **By preference: prepare a grant agreement (distribution of funds among partners) before submitting**
- **Make sure that the administrations of all partners are prepared to supply information/sign contracts**
- **Make sure the advantages of the collaboration fit the general goals of all partners**
- **Challenge: change of availability of personnel (and institute administrator) during the project period**
